

## Solidatus

### Web Application Developer – City of London, UK

Solidatus is looking for a talented, hardworking engineer to develop user focused web apps in a small and dedicated team, based near Fenchurch Street in the City.

As part of the team, you will work alongside experienced developers and primarily be developing products with JavaScript, HTML and CSS.

However, since we are a small team, you would share responsibilities spanning a wide range of the development process including design and ideas, planning, backend development and maintenance, company infrastructure, etc..

#### THE PERSON:

Working in a relaxed but delivery driven environment, a good candidate would:

- Have performed well academically and be a good learner
- Take pleasure in creating elegant code
- Have some experience with JavaScript, CSS and (Java or C#)
- Enjoy cutting edge web development and exploring new technologies
- Have an eye for detail and be able to recognise and appreciate a good UI

In addition, some of these might mean something to you:

Vanilla JS – this, set Timeout, CoffeeScript, document.createElement, depth-first pre-order traversal, ::before, :before, jQuery, Redis, LESS/SASS/Stylus, RequireJS, TypeScript, ASP.Net MVC, WebSockets, Canvas, AngularJS, Knockout.

TO APPLY: Please send your CV and a short description about yourself and why you would be a good fit for our company, to [careers@solidatus.com](mailto:careers@solidatus.com).
