

Data lineage visualised: Gain a trusted 360 view of your organisation's data flows

Create and analyse a visual representation of the connections that define and drive your organisation through collaborative knowledge-sharing within one centrally-managed solution.

Solidatus solves the critical data challenges faced by organisations globally by delivering transparency and trust in their data.

Solidatus enables organisations to rapidly discover and map their data landscape through its world-leading visualisation of lineage, together with the technical and business metadata that informs and contextualises that lineage.

Solidatus' world-leading data lineage tool helps organisations:

Regulate

Data lineage demonstrates how organisations achieve results, with regulators highlighting how data lineage is necessary for transparency and to establish confidence in data governance.

Transform

Where many systems are involved across multiple departments in transformational projects, lineage can play a pivotal role in mitigating risk and assessing impacts.

Optimise

With data lineage, you can have visibility of all organisational systems and data flows, making it easy to identify redundancies and improve operational efficiencies.

Govern

Data governance is the management and control of data where usage, accuracy and integrity of data assets is monitored. To achieve confidence in governance, you need data lineage.

Why Solidatus

- **The fastest time to value and greatest ROI**

Solidatus is the fastest to install and implement with easy adoption and proven efficiency savings of up to 90%.

- **Fully audited and comprehensive change management**

Reduce migration risks and costs with the ability to have all changes seen in context and auditable, giving confidence to regulators.

- **Business knowledge acquisition**

Business knowledge combined with data lineage enables faster identification of correct data, impact analysis, and gaps in report coverage, meaning organisations can trust their data and ultimately make better decisions.

- **Automate and collaborate to accelerate**

Federate data lineage to system owners, automate using connectors, integrate proprietary systems with our open API to deliver technical and business level insights on end-to-end critical data element flows.

- **Leverage existing technology**

Technology-agnostic — we provide a hybrid approach to model both contemporary and legacy technology, enabling targeted, cost-effective improvement of your organisation's systems estate.

Fast, flexible and enterprise ready

Efficiently map, manage and monetise key data assets with our cutting-edge unique temporal graph database technology.

User-friendly

Intuitive, simple-to-use interface means a short learning curve for all levels of business. Quick and easy deployment either on-premise or in the cloud.

Flexible, customisable, extendible

Flexible enough to solve multiple organisational data challenges, customisable to suit your business needs and extendible to offer customer developed enhancements.

Rapidly build lineage

Import data from other systems using data connectors, data import facility or our open API. Immediately start modelling and quickly identify where additional discovery is required.

Enterprise scale and performance

Visualise millions of data points and flows while remaining operationally performant and functional with our performance-tuned, enterprise-ready, browser-based UI.

About Solidatus
