Cloud Data Management:
Migrate, optimize and transform

Solidatus is the only visual solution that meets the demands of a complete Cloud migration.

Businesses are turning to the cloud for reliability, scalability, flexibility and consistent processing – but, with great transformation comes complexity and risk. By dynamically mapping a company's data in motion, Solidatus provides the blueprint needed for successful Cloud migration.

With Solidatus, prepare your migration strategy by identifying mission critical data and eliminating redundant information – enrich this data with current regulations, service agreements and business intelligence allowing for in-depth impact analysis before each asset is moved into the cloud.

Envision and plan — **Build and migrate** — **Govern and optimize**

Market leading digital business
- Deliver data driven decisions
- Remain agile, ready to scale for growth
- Maintain a diverse cloud-services architecture
- Serve customers in a rapidly growing business environment

Solidatus' multi-dimensional data lineage and modeling tool dynamically connects and visualizes complex data relationships enabling companies with a mix of on-premise and cloud environments to retain full control of their data assets.

Key benefits

- **Build a complete cloud migration strategy**
  Prevent data duplication and wasted resources by experimenting on a linked snapshot of the current view, assessing the impact of making changes as regulations evolve, and as new data sources and organizations come online.

- **Maintain a diverse cloud-services architecture**
  Solidatus' lineage-first technology dynamically connects and visualizes complex data relationships, breaking down silos and allowing global organizations with multi-cloud data infrastructures to avoid vendor lock-in and ensure compliance.

- **Protect your reputation**
  Mitigate the significant reputational risks associated with a data breach and avoid regulatory fines and sanctions by mapping data privacy, access and retention rules across all your business entities, jurisdictions, data categories, usages and systems – delivering major time savings and efficiency increases.

- **Collaborative data management**
  Solidatus allows data management to be distributed, federated and democratized. Enable subject matter experts to discover, document, validate and disseminate information and expertise, while unlocking actionable insights behind data.

- **Transform your organization**
  Use initial investment in cloud transformation to deliver a 360° view across your organization to elevate and transform its data capabilities, improving data management and governance to increase revenue streams.
