

Factsheet

General Data Protection Regulation

The General Data Protection Regulation (GDPR) was designed to give back control of personal data to the individual while defining a clear set of rules on data protection for European Citizens. It's not just European-based companies that need to take note, all organizations that process personal data of EU citizens must also comply with the regulation.

Key principles and considerations

GDPR clearly sets out seven key principles:

- Lawfulness, fairness and transparency
- Purpose limitation
- Data minimization
- Accuracy
- Storage limitation
- Integrity and confidentiality
- Accountability

Appropriate tooling is required to adhere to and facilitate the effectiveness of the principles to mitigate risk of personal data misuse. A solution that is both strategic and operational is required. A digital operational blueprint that allows an organization to be truly compliant, while enhancing the business' use of data to meet its goals.

Solidatus allows organizations to adhere to all seven GDPR principles by providing a tool that can model GDPR data requirements against their data management capabilities and onto their people, processes and data. It provides an end-to-end holistic view of data governance and a more group-wide view of data sharing while remaining compliant.

Key benefits

Data lineage plays a vital role in GDPR by mapping the flow of data within an organization and allowing for full transparency on how it is used. Solidatus helps to build a digital dashboard demonstrating to managers how personal data is being used. It accelerates compliance, mitigates risk and facilitates customer 360 views for organizations through understanding GDPR's data management requirements.

- **Company-wide collaboration**
Through its collaborative and crowdsourcing model, Solidatus allows for quick and effective enterprise-wide identification of where personal information is held. Working with all teams across the organization, a clear understanding can be made of exactly where data is and how it's being used in business and IT processes.
- **Visualize and map metadata**
Through its collaborative and crowdsourcing model, Solidatus allows for quick and effective enterprise-wide identification of where personal information is held.

Working with all teams across the organization, a clear understanding can be made of exactly where data is and how it's being used in business and IT processes.

- **Proactive approach to compliance**
Solidatus enables companies to prove to the regulator that they are taking a proactive approach to GDPR by clearly documenting and auditing their data landscape and privacy impact assessment. Solidatus can quickly discover, document and share models, simplifying the process of being compliant.
- **Demonstrate PIA risk**
Through its collaborative and crowdsourcing model, Solidatus allows for quick and effective enterprise-wide identification of where personal information is held. Working with all teams across the organization, a clear understanding can be made of exactly where data is and how it's being used in business and IT processes.

Discover – Visualize – Act

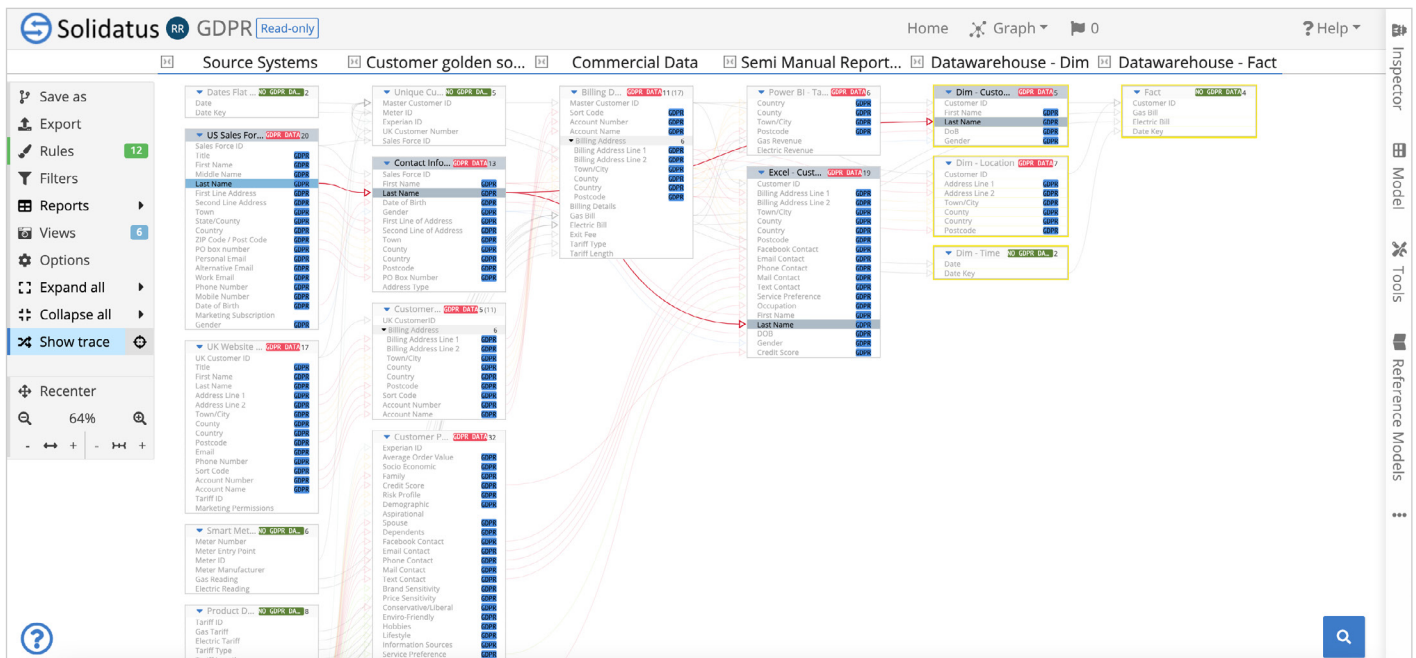

Solidtus for GDPR

By using Solidatus, an organization gains invaluable insight into their data landscape. It enables a business to visualize and analyze to better govern what data they hold, who has access to it and for what purpose, how it moves through their systems and how it changes over time.

The Solidatus Data Privacy module:

- provides a digitized version of GDPR that enables an organization to directly link regulatory clauses against their processes, the people that interact with them and the data that is generated and utilized by them
- allows organizations to track changes in the regulation over time to automatically assess impact of regulatory change

- enables businesses to create a common taxonomy of several data privacy regulations such as PDPA, CCPA, LGPD, etc, to allow for simplification of implementation and re-use of regulatory work product. Organizations can additionally compare privacy regulations across several dimensions including scope and jurisdiction.

About Solidatus

Solidatus is an innovative data management technology company, empowering organizations to unlock the true business value behind their data. Our lineage-first technology enables organizations to connect and visualize data relationships across the enterprise, simplifying how they identify, access and understand them. Launched in 2017, Solidatus is the chosen data management tool for both the regulators and the regulated. Its clients and investors include top-tier global financial services brands such as Citi and HSBC, healthcare and retail organizations as well as government institutions. Solidatus has offices in the United Kingdom, the United States and Singapore. For more information, visit www.solidatus.com
