

# Factsheet

## Healthcare - Navigating its complex data landscape

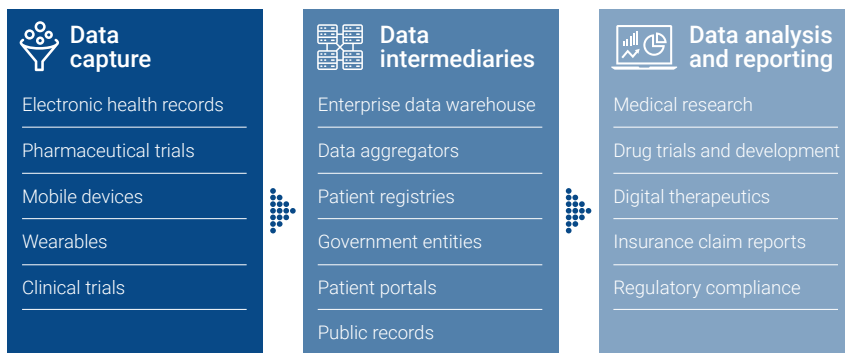

Unprecedented levels of digital transformation call for sophisticated data management encompassing everything from medical trials and patient data to drug development and biomedical research. Solidatus enables healthcare firms to garner stronger insights to boost decision-making through more connected, powerful data that improves outcomes while also complying with privacy regulations.

### Actionable intelligence from complex data

Solidatus empowers organizations to take a proactive approach to data management resulting in improved customer engagement and a high level of trust in the market.

A citizen's healthcare records span multiple jurisdictions and countless systems (new and legacy) with thousands of points of capture. At an organizational level, mergers and acquisitions often bring in new systems, records and databases.

### Healthcare's data ecosystem contains many layers

The recent pandemic has driven a radical change in working patterns, and an accelerated adoption of cloud computing and telehealth, putting the global healthcare system under tremendous pressure.

Healthcare is at a pivotal moment – points of data capture around each patient have expanded exponentially offering unforeseen opportunity to provide world class medical care to more people. More data, however, requires agile tools to successfully meet an expanding set of regulations like HIPAA, GDPR, GCP and REACH. Failure to approach this new digital world holistically will likely leave businesses struggling to stay afloat.

### Key benefits

- **Inform clinical and operational decisions**  
Business knowledge combined with data lineage enables faster identification of correct data, impact analysis, and gaps in report coverage, meaning organizations can trust their data and make better decisions.
- **Leverage regulatory spend**  
Ensure mandatory regulatory spend not only achieves regulatory compliance but also delivers a 360° view across your organization to elevate and transform your organization's data capabilities, improving data management and governance to increase revenue streams.
- **Protect your reputation**  
Mitigate significant reputational risks associated with a data breach and reduce the subsequent regulatory fines and sanctions by tracking patient data, its use, and how it interacts with an organization's systems and processes.
- **Demonstrate reliability and transparency**  
Significantly reduce compliance costs by taking a proactive approach to compliance. By clearly documenting and auditing your data landscape, regulatory assessments become instant.

# Features

## Company-wide collaboration

Through its collaborative and crowdsourcing model, Solidatus allows for quick and effective enterprise-wide identification of where patient information is held. Working across the organization, a clear understanding can be made of exactly how data is being used in business and IT processes.

## Visualize and map metadata

Data flow can be clearly mapped out to visualize each contact point, and ownership can then be assigned. With this knowledge, organizations can confidently and quickly fulfil a PHI (Protected Health Information) request.

## Deliver business intelligence

Solidatus' reference model capability integrates business knowledge with technical metadata across flows. Categorize and identify the right data for regulatory assessments, ensure completeness and view lineage to the source.

## Leverage existing technology

Solidatus is technology-agnostic – we provide a hybrid approach to model both contemporary and legacy technology, enabling targeted, cost-effective improvement of your organization's systems estate.

## Traceability

Solidatus facilitates the timely tracking of drug trials through managing data flows and ensuring the reduction of redundancy and misuse of data.

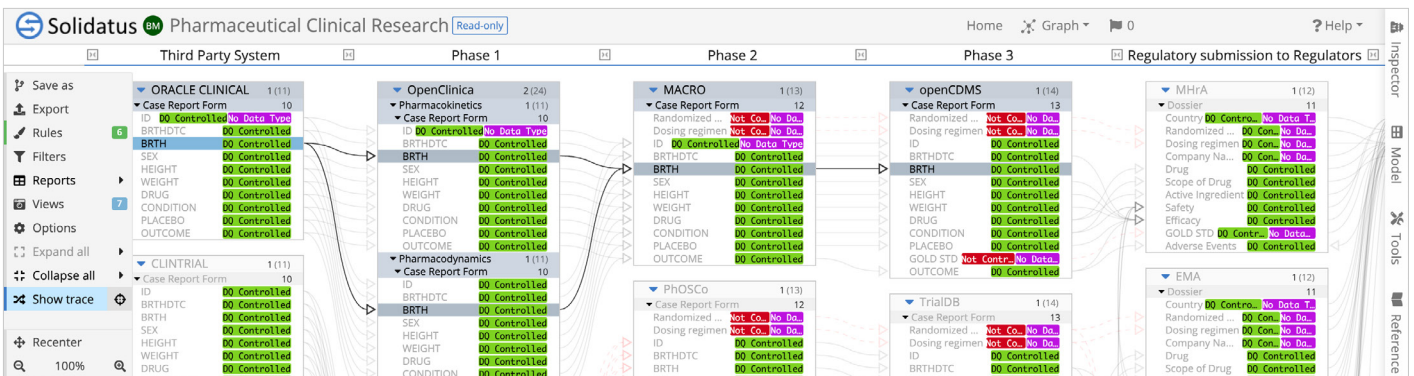

### Case study: Leading pharmaceutical firm connects global data into one source of truth

A major pharmaceutical company needed to understand its data landscape – Solidatus automated the visualization

of numerous data flows, dependencies and processes to reveal insights for better strategic planning and decision-making.
