The leading active metadata and connected governance platform

Solidatus serves heavily regulated and data-complex organizations by providing an enterprise-wide data governance solution that goes beyond traditional data lineage and catalog offerings. With Solidatus, you can bring all the components of your data fabric into a single view – one that can be scaled and applied in endless ways.

- Eliminate data blind spots and save 75% in costs
- Complete transformation projects in six months versus three years
- Reduce time to decision from months to minutes

Beyond data lineage

✓ End to end governance

- Single, unified view showing your data's origin, structure, consolidation, quality, and any changes it undergoes throughout its journey.
- Combine data quality (DQ) and business control inventories, visualize DQ issues in context, speed up root cause analysis, and enhance data quality throughout the value chain.
- Simplify and consolidate information sources enhancing discoverability and management of data during cloud migration or decommissioning.

✓ Connected catalog of catalogs

- Consistent taxonomy of data definitions at the data element level making data easily accessible and understandable across all systems and applications.
- Provide digitized and immutable proof of compliance, minimizing the manual effort and resources needed to prepare for examinations.

✓ Build fast, automate and interrogate your data

- Bring your data governance blueprint to life with tags and links. Use display rules, filters, and views.
- Visualize relevant perspectives of your data environment and create persona-specific views.
- Tag sensitive data to understand how it flows and where it resides across the enterprise.
- Trace regulatory obligations against policies, standards and processes.

✓ Fully audited, collaborative workspaces

- Leverage as-is, as-was, and to-be views of your data landscape for all your decision-making needs.
- Automatically maintain an audit trail of any data changes with differences displayed along a timeline.
- Maintenance can be shared, federated, and democratized. Experts can find, record, confirm, and share knowledge and insights from your data.

✓ Unrivalled connectivity

- Supercharged and deep-level connectors analyze code, ETLs, BI reports, schemas, catalogs, glossaries, dictionaries, data types, data quality issues and more.
- Automate technical lineage by parsing ETL logic and linking data flow and transformations to a standard schema, enabling data flow capture, modeling, and visualization within and between applications.
- Take advantage of unlimited metadata ingestion through our 'plug n play' connectors, open API and SDK framework along with a suite of file import templates.

“Solidatus is helping us extend and integrate the metadata repositories we use to maintain our market-leading data complex. Solidatus is helping BNY Mellon drive better data outcomes.

Eric Hirschhorn

Chief Data Officer, Bank of New York Mellon

“With Solidatus, I can visualize the data model for each business outcome, manage the requirements of key stakeholders and provide greater clarity over the intricacies involved in addressing their requests. Only Solidatus gives you this level of control.

Sid Mubashar

Head of Wholesale Credit & Lending Data and Monitoring, HSBC

A foundation with unlimited possibilities

Solidatus empowers organizations to connect and visualize their data relationships, simplifying how they identify, access and understand them.

✓ Data-rich enterprises can meet:

- Regulatory requirements
- Drive digital transformation
- Capture business insights and make more informed data-driven decisions

✓ We provide solutions for several critical areas:

- Governance and regulatory compliance
- Data risk and controls
- Business integration
- Environment, Social and Governance (ESG)
- Data sharing

Solidatus' clients and investors include top-tier global financial services brands such as Citi and HSBC, healthcare, and retail organizations as well as government institutions.
